SUMMARY

Software Engineering undergraduate with industry internship experience in full-stack development, backend systems and software engineering practices. Experienced in building web applications, mobile applications and cross-platform software solutions. Seeking graduate software engineering opportunities to contribute technical skills and develop scalable software solutions.

EDUCATION

Multimedia University (MMU)

Bachelor of Computer Science (Hons.) in Software Engineering

- CGPA: 3.90 / 4.00

Cyberjaya, Malaysia

Jul. 2023 – Jul. 2026

EXPERIENCE

Software Engineering Intern

GlobeOSS Sdn. Bhd.

Jul. 2025 – Oct. 2025

Shah Alam, Malaysia

- Developed frontend and backend features using React, Next.js, Express.js, TypeScript and T-SQL.
- Implemented reusable UI components, API hooks, Azure Maps integration and interactive dashboards using Shaden UI and Tailwind CSS.
- Improved application responsiveness through lazy loading and optimized API requests.
- Collaborated with senior developers using Git and Agile methodologies to deliver enterprise software solutions.

PROJECTS

BlueStep Connect Toolkit | *Kotlin, C# BLE, WebSocket, React, TypeScript, Photino.NET*

- Developed a motion-based game controller framework enabling users to control PC games through walking and body movements.
- Built an Android application using Jetpack Compose and Bluetooth Low Energy (BLE) for real-time sensor communication.
- Developed a C# desktop application integrating BLE communication, WebSocket data transmission and ViGEm virtual Xbox controller emulation.
- Implemented GPX trail generation and a customizable gamepad editor for controller configuration.
- Designed a customizable JSON-based controller layout and SDK integration for multiple game engines.

Campus Equity Hub | *Flask, Python, SQLAlchemy, Bootstrap*

- Applied software design patterns to improve code organization, maintainability, and scalability of the system.
- Implemented the **Apply Special Status**, **Verify Item**, **Verify Special Status**, and **Accept Swap** workflows across the frontend and backend.

Kindergarten Payment Management System | *Flask, Python, SQLAlchemy, Bootstrap*

- Developed the backend architecture for the system.
- Integrated authentication and authorization mechanisms for user access control.

AWARDS & CERTIFICATIONS

1st Runner-up – Best Project Award (Software Engineering Specialization)

Huawei ICT Academy – HCIA-AI V4.0 Course Completion

TECHNICAL SKILLS

Languages: Java, C#, Kotlin, Python, TypeScript, JavaScript, SQL, C++

Frameworks: React, Next.js, Express.js, Flask, Jetpack Compose

Frontend: HTML, CSS, Tailwind CSS, Bootstrap, Shaden UI

Databases: T-SQL, MySQL, SQLite

Developer Tools: Git, Docker, Swagger, Postman, Azure Maps, Unity, Android Studio, Visual Studio, VS Code

Concepts: REST APIs, Bluetooth Low Energy (BLE), WebSocket, Object-Oriented Programming, Agile Development
